

KSV65 Ball Joints

Anti-Vibration Spherical Bearings

Ball joints allow flexible movement whilst tolerating heavy radial and axial loads. Commonly used in vehicle suspensions, they provide anti-vibration support for dynamic parts. Our ball joints feature an internal safety stop system to guarantee full safety in case of impact breaks. Available in a variety of shore hardnesses and compounds to suit your application.

Features:

- Rounded spherical bearing with internal sleeve
- Internal safety stop system in case of impact breaks
- Available in shore hardness range of 35-70
- Stainless steel available on request
